

# Workshop on Multi-Higgs Models

16-18 September 2009

Lisbon - Portugal

This Workshop brings together those interested in the theory and phenomenology of Multi-Higgs models. The program is designed to include talks given by some of the leading experts in the field, and also ample time for discussions and collaboration between researchers. A particular emphasis will be placed on identifying those features of the models which might be tested at the LHC.

For registration and/or to propose a talk, send an email to:
